Run on: MPsrch_pp protein - protein database search, using Smith-Waterman algorithm Thu Nov 26 00:01:31 1998; MasPar time 2.31 Seconds 151.826 Million cell updates/sec

Tabular output not generated.

Description: Perfect Score: Sequence: Title: >US-09-033-662-2 (69-82) from US09033662.pep 1 PSCVTVQRCGGCCP 14

Scoring table: PAM 150 Gap 11

Searched: 69111 seqs, 25083644 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: swiss-prot35 1:swiss1

Statistics: Mean 24.744; Variance 39.426; scale 0.628

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

BINDING OF THIS GROWTH FACTOR TO ITS AFFINITY RECEPTOR ELICITS A VARIETY OF CELLULAR RESPONSES. IT IS RELEASED BY PLATELETS UPON WOUNDING AND PLAYS AN IMPORTANT ROLE IN STIMULATING ADJACENT CELLS TO GROW AND THEREBY HEAL THE WOUND. MAY HAVE A CHEMOTACTIC ROLE INTIMAL THEKENING.

MAY HAVE A CHEMOTACTIC ROLE INTIMAL THEKENING.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CELLS OF MESENCHYMAL ORIGIN. BINDING OF THIS GROWTH FACTOR TO ITS AFFINITY RECEPTOR ELICITS A VARIETY OF CELLULAR RESPONSES. IT IS RELEASED BY PLATELETS UPON WOUNDING AND PLAYS AN IMPORTANT ROLE IN STIMULATING ADJACENT CELLS TO GROW AND THEREBY HEAL THE WOUND. SUBUNIT: ANTI-PARALLEL DISULFIDE-LINKED DIMER OF NONIDENTICAL (A AND B) CHAINS. HOWODIMERS OF A AND B CHAINS ARE IMPLICATED IN TRANSFORMATION PROCESSES.

BINDING OF THIS GROWTH FACTOR TO ITS AFFINITY RECEPTOR ELICITS A VARIETY OF CELLULAR RESPONSES. IT IS RELEASED BY PLATELETS UPON WOUNDING AND PLAYS AN IMPORTANT ROLE IN STIMULATING ADJACENT CELLS TO GROW AND THEREBY HEAL THE WOUND. SUBUNIT: ANTI-PARALLEL DISULFIDE-LINKED DIMER OF WONIDENTICAL (A SUDUNIT: ANTI-PARALLEL DISULFIDE-LINKED DIMER OF WONIDENTICAL (A AND B) CHAINS. HOMODIMERS OF A AND B CHAINS ARE IMPLICATED IN
                                                                                                                                                                                                                                                                                                                                                   PSCVTVQRCGGCC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         h 80.2%;

#ITTED (NOV-1996) TO EMBL/GENBANK/DDBJ DATA BANKS.

#UNCTION: PLATELET-PERIVED GROWTH FACTOR IS A POTENT MITOGEN FOR CELLS OF MESENCHYMAL ORIGIN. BINDING OF THIS GROWTH FACTOR TO ITS AFFINITY RECEPTOR ELICITS A VARIETY OF CELLULAR RESPONSES. IT IS RELEASED BY PLATELETS UPON WOUNDING AND PLAYS AN IMPORTANT ROLE IN STIMULATING ADJACENT CELLS TO GROW AND THEREBY HEAL THE WOUND.

MPsrch_pp protein - protein database search, using Smith-Waterman algorithm

Run on: Thu Nov 26 00:00:38 1998; MasPar time 3.45 Seconds 148.181 Million cell updates/sec

Tabular output not generated.

Description: Perfect Score: Sequence: >US-09-033-662-2 (69-82) from US09033662.pep 121

1 PSCVTVQRCGGCCP 14

Scoring table: PAM 150 Gap 11

Searched: 120441 segs, 36531193 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database:

pir56 1:pir1 2:pir2 3:pir3 4:pir4 5:nrl3d

Statistics: Mean 23.485; Variance 43.203; scale 0.544

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

NT The receptor for this growth factor is a tyrosine kinase. The receptor for this growth factor is a tyrosine for cells common platelet-derived growth factor, a potent mitogen for cells common platelet-derived growth factor, a potent mitogen for cells common platelet-derived growth factor, a potent mitogen for cells common platelet-derived growth factor which may be both of type A, both of type B, or an A-B heterodimer. Reduction of its disulfide bonds irreversibly destroys biological activity. Different receptors bind preferentially to A-A and B-B homodimers. This growth factor induces a variety of cellular B romodimers. This growth factor band A chains are encoded by genes located on different thromosomes. The two genes are expressed independently in human timer cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ##cross-references GDB:120709; OMIM:190040

Pred. d. No. is the number of results predicted by chance to have a re greater than or equal to the score of the result being printed, is derived by analysis of the total score distribution.

Splice variants (W00726-28) of the human vascular endothelial growth factor-like polypeptide SOW175 (see also W00725) are products of cDNA clones (see also SOW175 (see also T33610). They show at least 1 of the properties of SOW175 (see also T33610). They show at least 1 of the properties of SOW175 including the ability to induce proliferation of vascular endothelial cells, to interact with fit-1/fik-1 receptors, and to induce cell migration, cell survival and/or an increase in intracecllular levels of alkaline phosphatase. Recombinant SOM175 proteins can be used to induce astroglial proliferation and to promote neural survival and/or proliferation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Vascular endothelial growth Vascular endothelial growth astroglial proliferation.

                                                                                                                                                                                                                                                                                                            В
                                                                                                                                                                                                                                                                                                                                                                                                                                            PT vascular endothelial growth factor VEGF-B proteins - useful to PT accelerate angiogenesis in wound healing, also related nucleic acid PT and antibodies for cancer diagnosts:

CC W04824-W04831 represent the vascular endothelial growth factor (VEGF) CC W04824-W04831 represent the vascular endothelial or mesodermal cell CC proliferation. VEGF is also a glycosylated cationic dimer, and is CC sometimes referred to as vascular permeability factor (VPF). VEGF has CC diverse effects, depending on the specific biological context in which it is found. VEGF is a potent endothelial cell mitogen, and directly CC contributes to induction of angiogenesis in vivo by promoting endothelial CC cell growth during normal emproyence development, wound healing, and CC cell growth during normal emproyence development, wound healing, and contributes to induction of angiogenesis in vivo by promoting endothelial CC cell growth during normal emproyence for VEGF poteins of the invention CC and expressed in tissues differently to VEGF proteins of the invention CC and expressed in tissues differently to VEGF metasterion. Antibodies can therefore be used to accelerate angiogenesis in wound healing. Antibodies can can be used to growth and their properties of VEGF. The proteins can therefore CC complementary to the coding sequences for the proteins of the invention CC VEGF-B used to detect VEGF-B coding sequences. Quantification of CC VEGF-B in cancer biopsy specimens may be useful as an indicator of centastatic risk. VEGF-B expression in a cell can be retarded using CC expecially useful in retarding VEGF expression in tumour cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Š

PS Claim 18; Pages 58; 107pp; English.

CC W04824-W04831 represent the vascular endothelial growth factor (VEGF)

CC W04824-W04831 represent the vascular endothelial or mesodermal cell

CC proliferation. VEGF is also a glycosylated cationic dimer, and is

CC sometimes referred to as vascular permeability factor (VPF). VEGF is

CC contributes referred to as vascular permeability factor (VPF). VEGF is

CC contributes to induction of anglogenesis in vivo by promoting endothelial

CC cell growth during normal embryonic development, wound healing, and

CC cell growth during normal embryonic development, wound healing, and

CC cell growth during normal embryonic development, wound healing, and

CC share the anglogenic and other properties of VEGF, but are distributed

CC and expressed in tissues differently to VEGF, but are distributed

CC and expressed in tissues differently to VEGF, but are distributed

CC the proteins can be used for inhibiting anglogenesis. The antibodies can

CC complementary to the coding sequences for the proteins of the invention

CC can also be used to detect VEGF-B coding sequences. Quantification of

CC WEGF-B in cancer biopsy specimens may be useful as an indicator of

CC metastatic risk. VEGF-B expression in a cell can be retarded using

CC expecially useful in retarding VEGF expression in tumour cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

                                                                                                                                                                         CC W04824-W04831 represent the vascular endothelial growth factor (VEGF) croteins of the invention, which promote endothelial or mesodermal cell croteins of the invention, which promote endothelial or mesodermal cell croteins of the invention, which promote endothelial or mesodermal cell correctly contributes referred to as vascular permeability factor (VPF). VEGF has context in which it is found. VEGF is a potent endothelial cell mitogen, and directly contributes to induction of angiogenesis in vivo by promoting endothelial cell growth during normal embryonic development, wound healing, and context in which it cell growth during normal embryonic development, wound healing, and context in visual cell growth during normal embryonic development, wound healing, and context in visual cell growth during normal embryonic development, wound healing, and context in visual cell growth during normal embryonic development, wound healing, and context in visual cell growth development in visual cell in the invention context he angiogenesis in wound healing. Antibodies against the proteins can therefore be used to accelerate angiogenesis in wound healing. Antibodies can the proteins can be used for inhibiting angiogenesis. The antibodies can cell also be used diagnostically to quantitatively detect VEGF-B. Primers complementary to the coding sequences for the proteins of the invention of C VEGF B in cancer biopsy specimens may be useful as an indicator of metastatic risk. VEGF-B expression in a cell can be retarded using cell entirence lass and indicator of the special lass and indicator of the special lass and indicator of context lass and indicator of the special lass and indicator of the special lass and indicator of context lass and indicator of the special lass and indicator of the spec

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          factor-like polypeptide SOM175 (see also W00725) are products of cDNA clones (see also T33611-13) respectively lacking exon 6, exons 6+7, and exon 4 of the SOM175 gene (see also T33610). They show at least 1 of the properties of SOM175 including the ability to induce proliferation of vascular endothelial cells, to interact with flt-1/flk-1 receptors, and to induce cell migration, cell survival and/or an increase in intracellular levels of alkaline phosphatase. Recombinant SOM175 proteins can be used to induce astroglial proliferation and to promote neural survival and/or proliferation. Sequence 143 AA;

WRF167 (W00863) is the murine homologue of an alternatively spliced variant (W00726) of human vascular endothelial growth factor-like polypeptide SOM175 (W00725), a protein capable of inducing astroglial proliferation and of promoting neural survival and/or proliferation. Its amino acid sequence was deduced from a CDNA clone (T13810) isolated from a new-born mouse brain CDNA library. WRF167 shows 85% identity and 92% similarity to its human counterpart. It lacks 101 amino acids found in WRF186 (W00863), the murine homologue of SOM175, owing to a deletion of exon 6 during splicing.

PRESULT

AC WATER

AC WATE
        PT accelerate envoluences is in wound healing, also related nucleic acid process in an antibodies for cancer diagnosis

Claim 18; Page 55-56; 107pp; English.

CC W04824-W04831 represent the vascular endothelial growth factor (VEGF)

CC proteins of the invention, which promote endothelial or mesodermal cell

CC proteins of the invention, which promote endothelial or mesodermal cell

CC proteins of the invention, which promote endothelial or mesodermal cell

CC proteins referred to as vascular permeability factor (VPF): VEGF has

CC diverse effects, depending on the specific biological context in which it

CC is found. VEGF is a potent endothelial cell mitogen, and directly

CC contributes to induction of angiogenesis in vivo by promoting endothelial

CC cell growth during normal embryonic development, wound healing, and

CC tissue regeneration/reorganisation. The VEGF proteins of the invention

CC share the angiogenic and other properties of VEGF, but are distributed

CC is never the angiogenesis in wound healing. Antibodies against

CC the proteins can be used for inhibiting angiogenesis. The antibodies can

CC also be used diagnostically to quantitatively detect VEGF-B. Primers

CC complementary to the coding sequences for the proteins of the invention

CC can also be used to detect VEGF-B coding sequences. Quantification of

CC metastatic risk. VEGF-B expression in a cell can be retarded using

CC especially useful in retarding VEGF expression in tumour cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 12; Page 42-43; 113pp; English.

Splice variants (W00726-28) of the human vascular endothelial growth factor-like polypeptide SOM175 (see also W00725) are products of CDNA clones (see also T33611-13) respectively lacking exon 6, exons 6+7, and exon 4 of the SOM175 gene (see also T33610). They show at least 1 of the properties of SOM175 including the ability to induce proliferation of vascular endothelial cells, to interact with fit-1/flk-1 receptors, and to induce cell migration, cell survival and/or an increase in intracellular levels of alkaline phosphatase. Recombinant SOM175 proteins can be used to induce astroglial proliferation and to promote neural survival and/or proliferation. Sequence 188 AA;

CC W04824-W04831 represent the vascular endothelial growth factor (VEGF) cc proteins of the invention, which promote endothelial or mesodermal cell contents of the invention, which promote endothelial or mesodermal cell proteins of the invention, which promote endothelial or mesodermal cell contents of the invention on the specific biological context in which it is found. VEGF is also a glycosylated cationic dimer, and is contributes to induction on the specific biological context in which it is found. VEGF is a potent endothelial cell mitogen, and directly contributes to induction of angiogenesis in vivo by promoting endothelial cell growth during normal embryonic development, wound healing, and contist the angiogenic and other properties of VEGF, but are distributed the used to accelerate angiogenesis in wound healing. Antibodies against the proteins can be used for inhibiting angiogenesis. The antibodies can despressed in tissues differently to VEGF. The proteins can therefore the proteins can be used for inhibiting angiogenesis. The antibodies can also be used diagnostically to quantitatively detect VEGF-B. Primers complementary to the coding sequences for the proteins of the inventignation o

          Claim ii; Page 41: 113pp; English.

Human vascular endothelial growth factor (VEGF)-like polypeptide (W00725) is capable inducing the proliferation of vascular endothelial cells, of interacting with flt-l/fkl-1 receptors, and of inducing cell migration, cell survival and/or an increase in intracellular levels of alkaline phosphatase. It shows 33.3% identity with human VEGF (see also W00724). Splice variants (W00726-28) of SOM175 have also been identified. Recombinant SOM175 can be produced in host cells transformed with vectors carrying SOM175 CDNA (see also T33610). It is useful for inducing astroglial proliferation and for promoting neural survival and/or proliferation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Example 5; Fig 9: 113pp; English.

VRF186 (W00863) is the murine homologue of human vascular endothel growth factor-like polypeptide SOM175 (W00725), a protein capable inducing astroglial proliferation and of promoting neural survival and/or proliferation. Its amino acid sequence was deduced from a cDNA clone (T13809) isolated from a new-born mouse brain cDNA
                                                                                                                                                                       N-PSDB; T33610.

                                                                                                                                                                                                                                                                                                                 PT Vascular endothelial growth factor VEGF-B proteins - useful to PT accelerate anglogenesis in wound healing, also related nucleic acid PT and antibodies for cancer diagnosis

SC Claim 18; Page 62; 10/pp; English.

CC W04824-W04831 represent the vascular endothelial growth factor (VEGF)

CC proteins of the invention, which promote endothelial or mesodermal cell

CC proliferation. VEGF is also a glycosylated cationic dimer, and is

CC diverse effects, depending on the specific biological context in which it

CC cintributes to induction of anglogenesis in vivo by promoting endothelial

CC centributes to induction of anglogenesis in vivo by promoting endothelial

CC centributes to induction of anglogenesis in vivo by promoting endothelial

CC centributes to induction of anglogenesis in vivo by promoting endothelial

CC contributes to induction of anglogenesis in vivo by promoting endothelial

CC centributes to induction of anglogenesis in vivo by promoting endothelial

CC contributes to induction of anglogenesis in vivo by promoting endothelial

CC contributes to induction of anglogenesis in vivo by promoting endothelial

CC contributes to induction of anglogenesis in vivo by promoting endothelial

CC contributes to induction of anglogenesis in vivo by promoting endothelial

CC contributes to induction of anglogenesis in vound healing, and

CC contributes to induction of anglogenesis in wound healing. Antibodies

CC complementary to the coding sequences of VEGF. The proteins can therefore

CC complementary to the coding sequences for the proteins of the invention

CC complementary to the coding sequences for the proteins of the invention of

CC wetastatic risk. VEGF-B expression in a cell can be retarded using

CC centerions of the invention of veget expression in tumour cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ş
                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               diverse effects, depending on the specific biological context in which it is found. VEGF is a potent endothelial cell mitogen, and directly contributes to induction of angiogenesis in vivo by promoting endothelial cell growth during normal embryonic development, wound healing, and tissue regeneration/reorganisation. The VEGF proteins of the invention share the angiogenic and other properties of VEGF, but are distributed and expressed in tissues differently to VEGF. The proteins can therefore be used to accelerate angiogenesis in wound healing. Antibodies against the proteins can be used for inhibiting angiogenesis. The antibodies can also be used diagnostically to quantitatively detect VEGF-B. Primers complementary to the coding sequences for the proteins of the invention can also be used to detect VEGF-B coding sequences. Quantification of VEGF-B in cancer biopsy specimens may be useful as an indicator of metastatic risk. VEGF-B expression in a cell can be retarded using antisense sequences direct against the VEGF coding sequences, this is especially useful in retarding VEGF expression in tumour cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

This sequence is that of human vascular endothelial growth factor 3 (YEGF3). The growth factor can be used to stimulate angiogenesis and wound healing, and to promote vascular tissue repair. It can also be used to induce the growth of damaged bone, periodontium or ligament tissue. VEGF3 antagonists can be used to inhibit tumour growth, or to treat diabetic retinopathy, inflammation, rheumatoid arthritis or psoriasis. VEGF3 is structurally related to the PDGF/VEGF family and it includes the conserved signature motif for the family (see features table).

Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Mean 10.628; Variance 2.514; scale 4.228
